DUDE

About me

Founder, CTO of Digiotoimisto Dude Oy, runner, gamer, full stack developer, front-end developer, open source advocate, accessibility specialist, sysop, dad of two, music enthusiast, a synthwaver, coder since 1998, a WordPressian since 2005.

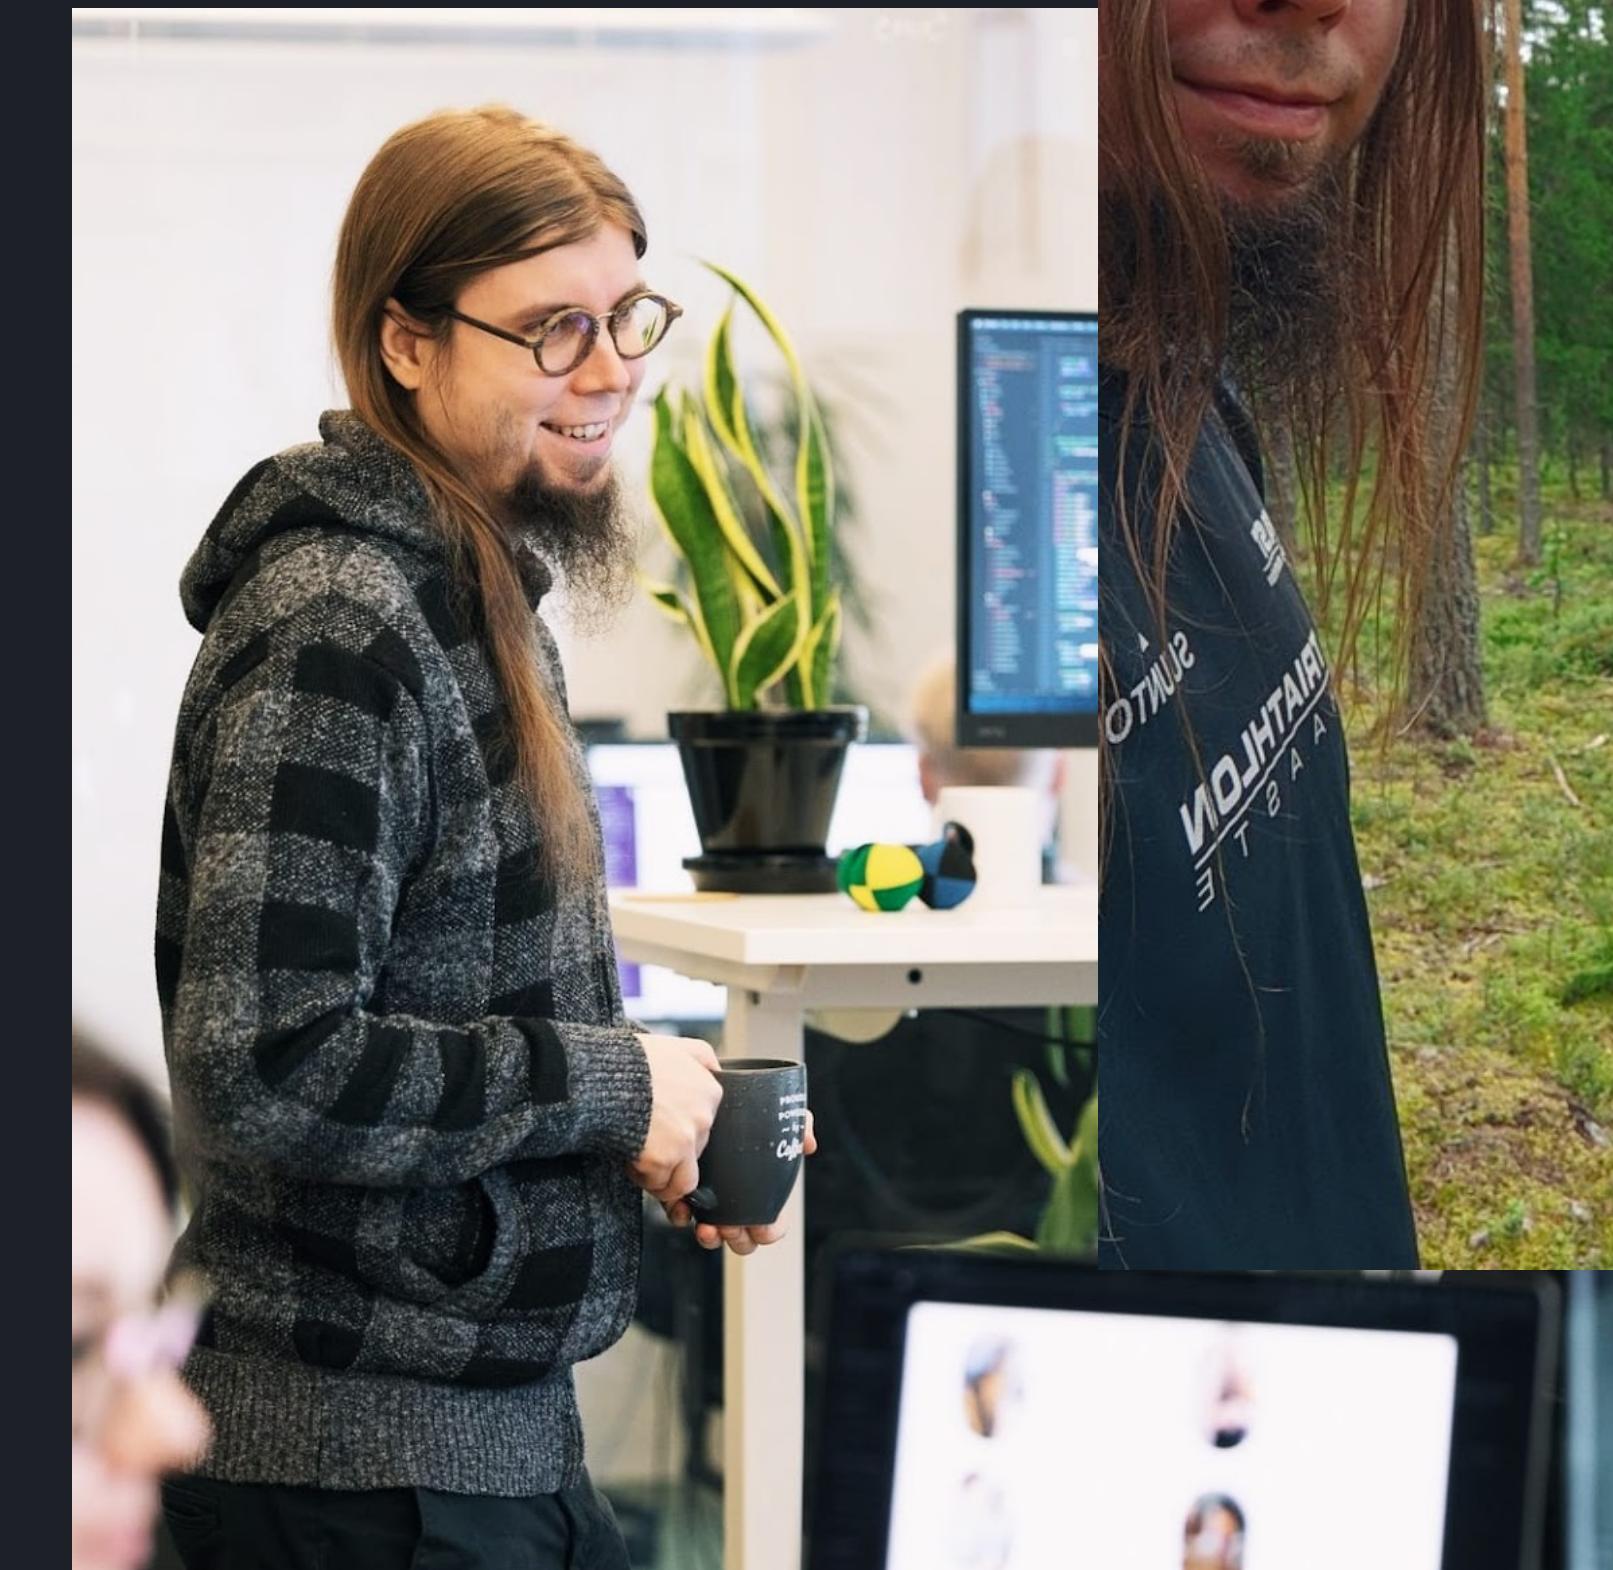

Dude & WordPress

Contributions to WordPress core and plugins since company was founded in **2013**, in total of **68** public repositories, **1** theme and **11** plugins in active development. Oh yeah and we design and code biz-websites. **11** dudes in 2023.

Work doesn't feel like work
when you're having fun

Roni or Rolle, he/him.

My happy place,
Running in the forest

```
git commit -m 'Finish Bathroom'
```

The Internet *is open source**

built on

Know any of these?

php

npm

git

Sass

JS

Imagine working without
any of these tools...

Adobe PageMill - [Untitled1.html]

File Edit View Insert Style Format Search Site Window Help

Paragraph Default Font ? B I

```
<HTML>
<HEAD>
  <META NAME="GENERATOR" CONTENT="Adobe PageMill 3.0 Win">
  <TITLE>Untitled Document</TITLE>
</HEAD>
<BODY>

<!--SELECTION--><!--/SELECTION-->

</BODY>
</HTML>
```

Good old HTML
(still awesome! btw)

Yep, that's me
in 1998 or something

It used to be this simple.

Open source is

- Helping others, while getting help yourself
- A healthy way of learning
- A social way to do things when you're not social
- Not always about code!
- Focusing in positivity, an act of kindness
- Improving things
- Letting go of insecurities and perfectionism
- Learning to say "*I was wrong*"
- Building your own tools
- Freedom
- ❤️

Benefits in releasing things as open source for WordPress businesses

- Getting true improvements from outside
- Constantly improving your toolkit
- Knowing to have an impact by giving back
- Transparency and openness increase trust
- Leaving your mark adds meaning
- Ensures maintainability
- Prevents vendor-locking

If open source has no downsides,
...why isn't everyone doing it? 🤔

Everyone else are pros, I'm not in the same league...

I'm not ready...

It's not *that* good...

lä! lä! Cthulhu fhtagn!

How do I sleep at night...

People will laugh at it...

I'm not *that* good...

What if someone steals it and makes money out of it...

Did I commit a card word...?

You matter! Yet feels like it matters.

I have that “does stuff” mega-commit...

Then I'm stuck with it for the rest of my life....

But it's not completed yet?

What if I make a mistake?

Not excellent enough...

I'm feel like an impostor.

What will my mom say...

What if someone sees my mistakes?

A man with dark hair and a mustache, wearing a light-colored suit jacket over a white shirt, is looking towards the camera with a surprised expression. He is holding a small, light-colored book or folder in his right hand, which is partially visible at the bottom left.

Time and Commitment.

See what i did there?

Add documentation #1

benthecarman commented on Apr 4

This looks like a great library for indexeddb, would be easier to get started if there were documentation

how to use this project to make a chatbot? #35

 Closed 9crk opened this issue on Jul 24 · 3 comments

9crk commented on Jul 24

Sorry for my lackness of the knowlege of llama2.
does this code only archive certain centence generating?
how to make a chatbot ?

 karpathy commented on Jul 25

It can be a chatbot with very light tweaks if you train it on chatbot data. Something we could look into over time. For now it's a token sampler / base model, see my Microsoft BUILD talk <https://www.youtube.com/watch?v=bZQun8Y4L2A>

Create step-by-step instructions on how to use this project #2

 Open 1 of 2 tasks guineveresaenger opened this issue on Jan 8, 2019 · 2 comments

Contributor

We should have instructions on how to use and deploy kube-service-exporter in the wild.

This should be part of the README, under "How To Use".

Set up KSE with vault on a given cluster

Show how to use consul templates and a load balancer (e.g. nginx) to use the outputted values

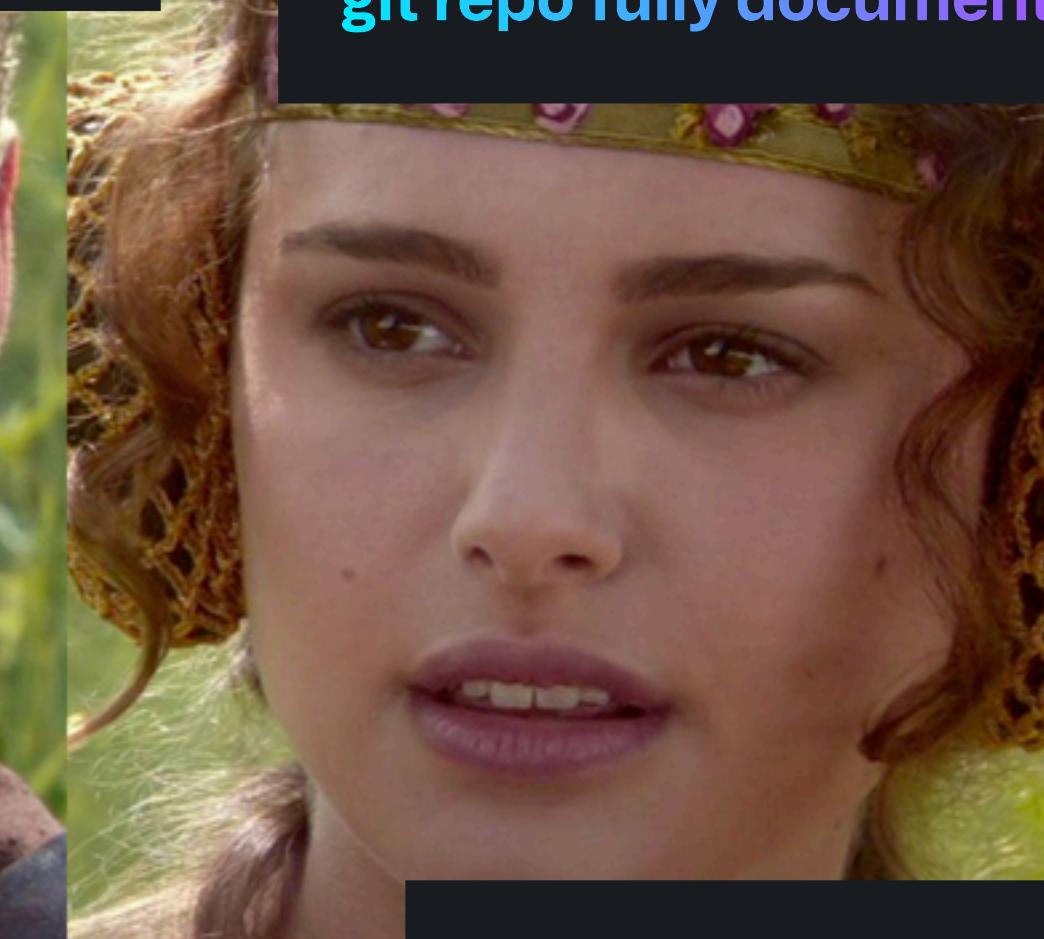

We released this must-use thing for
you to use with WordPress sites.

Wow nice! It is GPLv2 and has a
git repo fully documented, right?

I can use it right away for free, right?

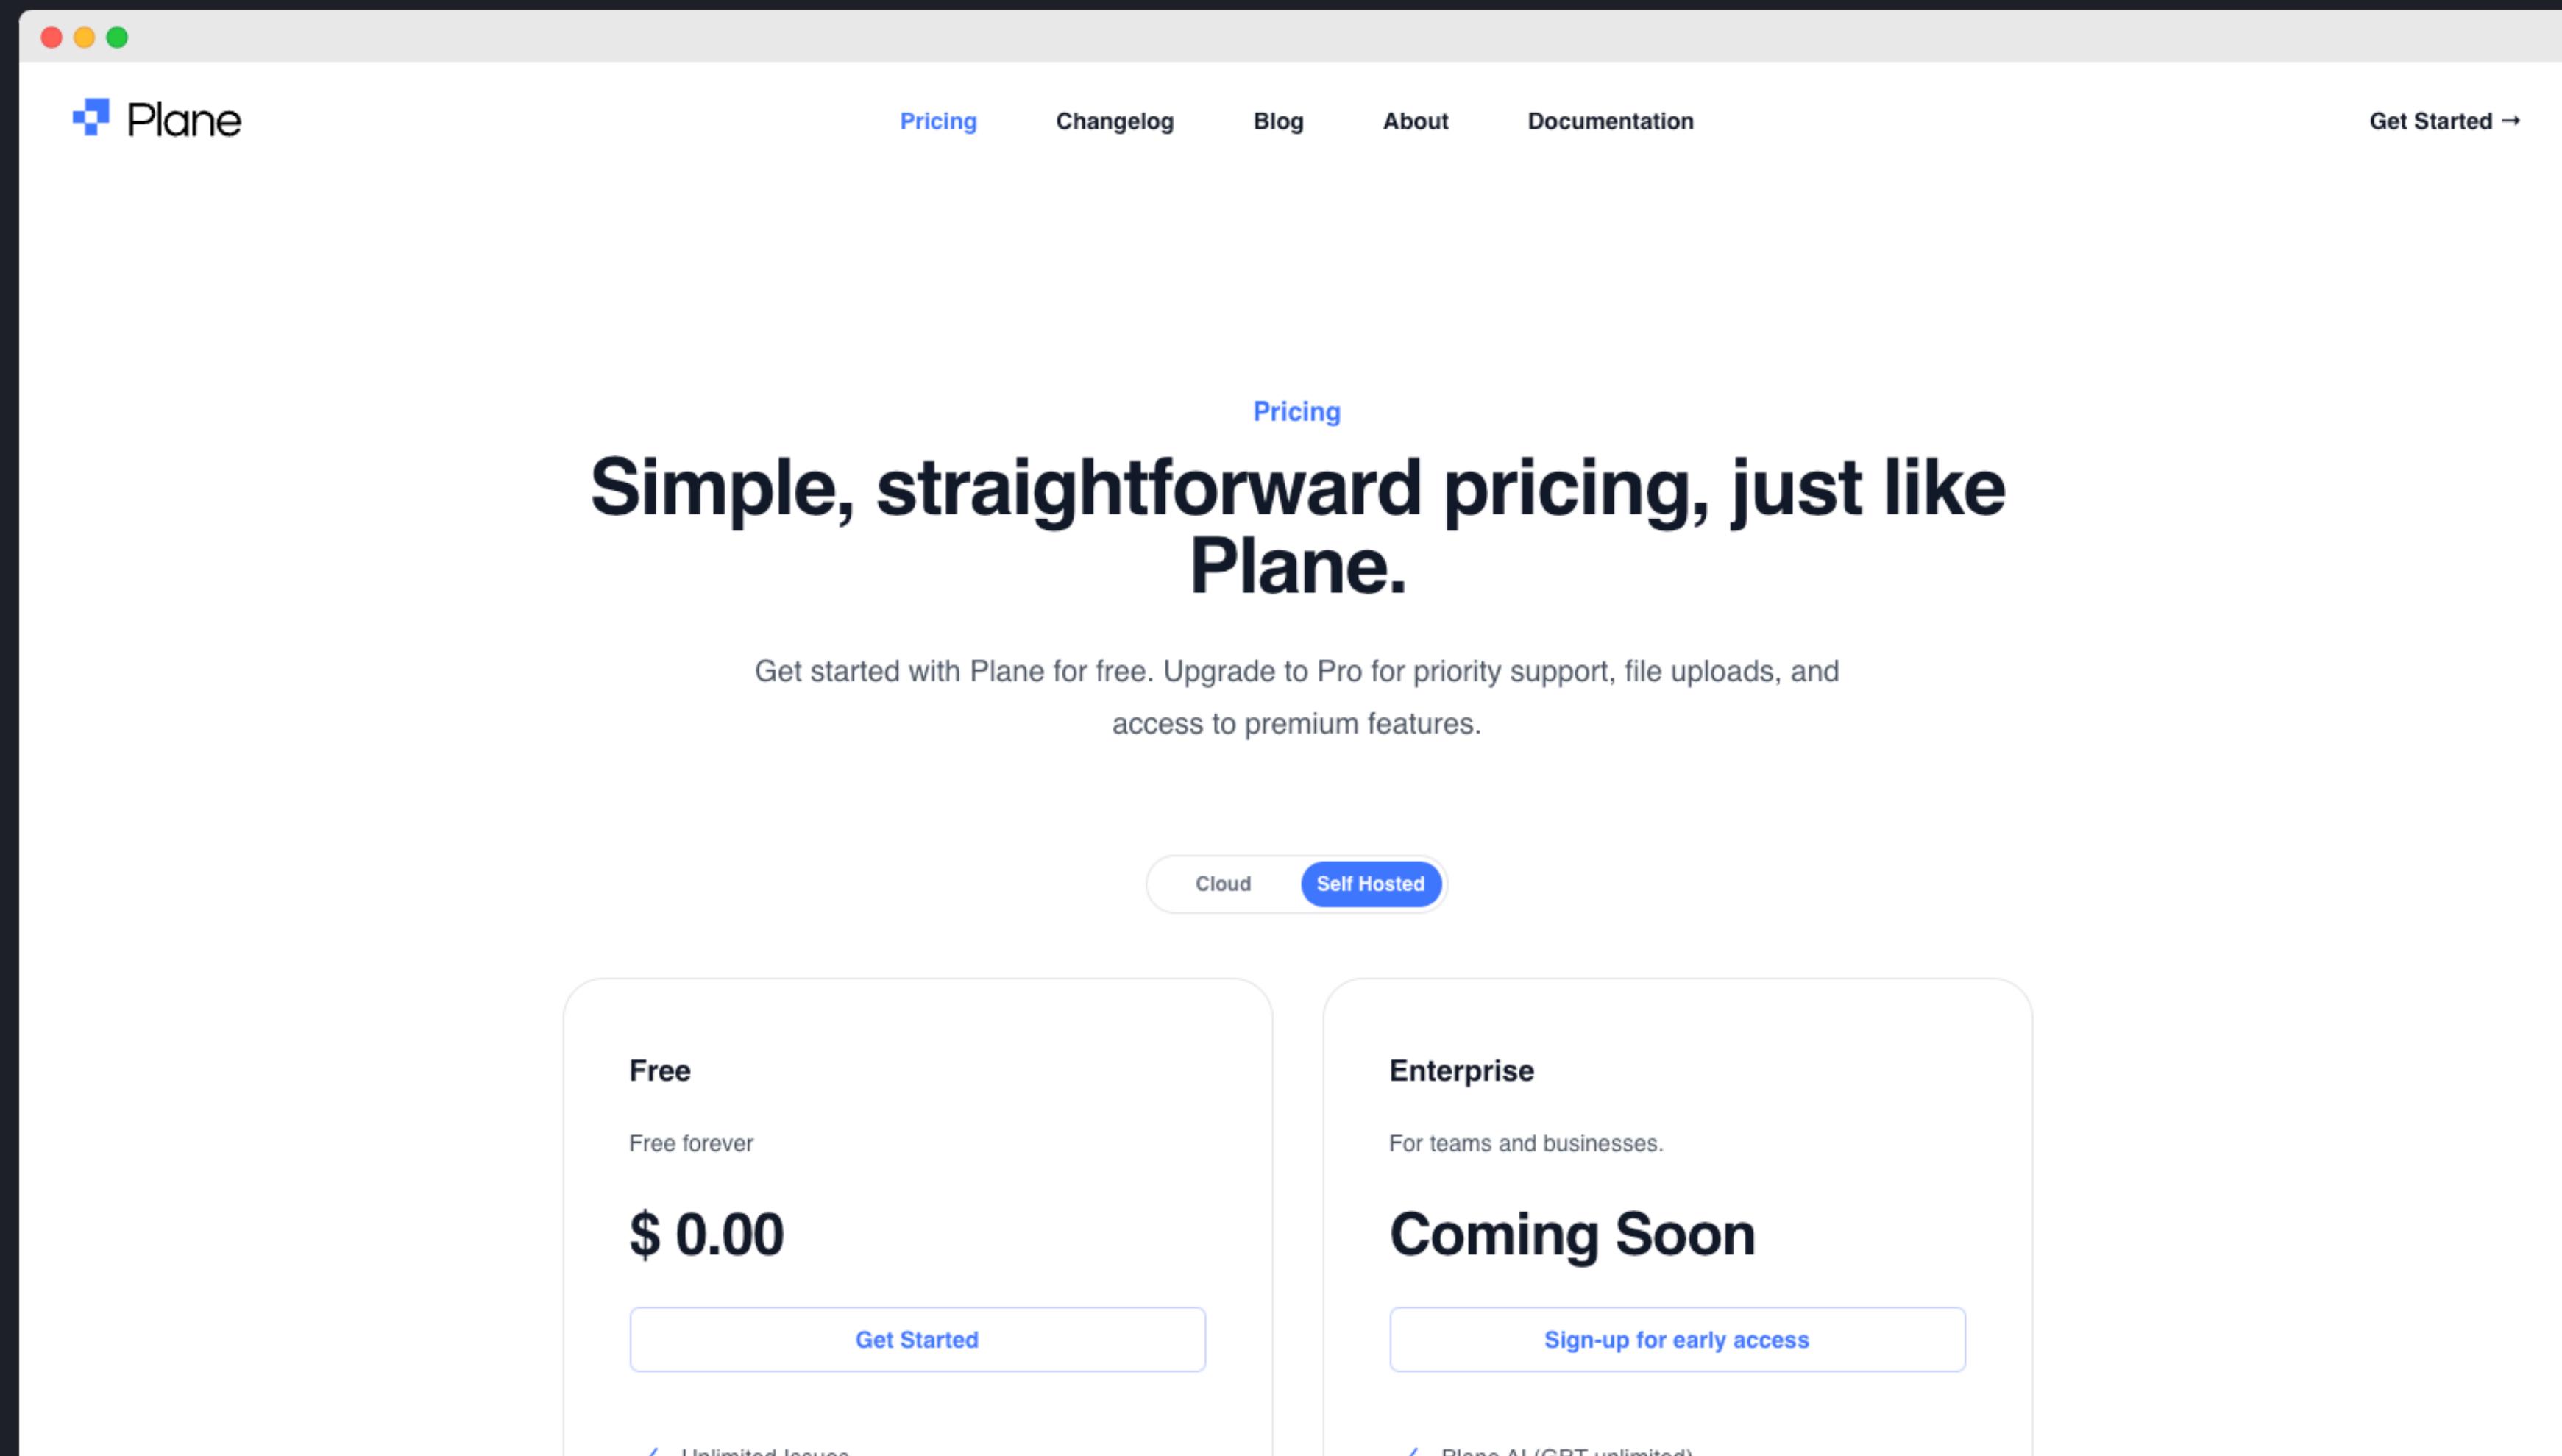

**“The product is
open source”**

**“We currently don’t
provide any support.”**

Open source is not marketing.*

* It can be used in marketing though, use it properly.

(I confess: I'm a phony, some of these are backups!)

The screenshot displays a GitHub profile for the user 'rolle'. The profile includes:

- Profile Information:** Includes links to Twitter (@rolle), Mastodon (@rolle@mementomori.social), and a GitHub account (rolle_).
- Achievements:** Shows several GitHub achievements, including 'x3' and 'x2'.
- Repos:** A grid of repositories:
 - SCSS (824 stars, 126 forks)
 - TypeScript (5 stars)
 - dracula/thelounge (Public, 6 stars, 2 forks)
 - digitomistodude/macos-lemp-setup (Public, 58 stars, 22 forks)
 - vscode-settings (Public, 10 stars, 1 fork)
 - mastodon-bird-ui (Public, 337 stars, 33 forks)
- Contributions:** A heatmap showing contributions over the last year, with a callout for "1 contribution on Saturday, September 9, 2023".
- Organizations:** Shows memberships in various organizations like EPIC GAMES, DUDE, and Apache.
- Activity Overview:** Lists recent contributions to repositories like 'ronilaukkarinen/simplenote-backup', 'ronilaukkarinen/mastodon-bird-ui', and 'ronilaukkarinen/finnish-mastod...
- Code Review:** A chart showing the percentage of code reviews completed, with a Y-axis from 1% to 99%.

Thank you!
